About Myself

Practical engineer with high motivation and passion for succeeding and progressing, excellent communication skills with team members , high responsibility. Looking for entry level positions in the Front-end , Back-end , Full stack developer

Professional Experience

Post silicon validation

Intel corporation, Haifa, June/2021 – Present

Maintaining server farms for post silicon validation of Intel Network Interface Cards (NICs). My responsibility is to ensure correct operation of the servers and to support the validation program, this includes handling the hardware, updating and testing the software, debugging of failures and developing automation.

The work requires knowledge of the Linux operating system.

Full Stack Developer

TikTak, Tel aviv, Mar/2021 - May/2021

Developed a digital education platform for teachers and students. Front-end: React hooks, SASS
Back-end: expressJS, MongoDB

Photographer

Michel Moallem Studio, April/2017 - August/2018

Cameraman at weddings and events.

Education

Full-Stack Development

Founders and Coders, 2020-2021

WebAhead is a 4-month Full Stack JavaScript Bootcamp that focuses on node.js and React, including projects using SQL, express.js, HTML, CSS, ES6. The course is full-time, intensive and it is taught in English, it aims to teach practical and solid skills necessary for the high tech industry.

PE – Software engineering - GPA:84

Technion school of practical engineer, 2018-2020

Final Project “Inventory management system”

- Final project in C# , work environment Visual Studio 2019
- Data Base : Access

Full Stack Project's :

- Blueberries-shop : This website is an e-commerce website developed using React. The website was developed for blueberries ice cream shop in Nazareth.
- My Resume : This project represents my resume as a website.
- Duroos : Developed a digital education platform for teachers and students that connects teachers and students. This project refers to Tik tak company.
- Events App : It's like a memory box, that can save all the friends wishes for each event that the user has already created.

Technologies:

Front End:

- React.js , html , CSS , Material UI

Back End:

- Express.js , MongoDB , Postgresql

We used: Heroku to deploy our server, Netlify to deploy the website.
